Endnotes:

¹ BSA's 2005 statistics are final. They represent the U.S. publishers' share of software piracy losses in each country, and follow the methodology compiled in the Second Annual BSA/IDC Global Software Piracy Study (May 2005), available at <http://www.bsa.org/globalstudy/>. These figures cover, in addition to business applications software, computer applications such as operating systems, consumer applications such as PC gaming, personal finance, and reference software.

² MPAA's trade losses and piracy levels for 2005 are available for a limited number of countries and are based on a methodology that analyzes physical or "hard" goods and Internet piracy. For a description of the new methodology, please see Appendix B of this report. MPAA reported additional loss numbers and piracy levels after the 301 decisions were made and these appear on this chart and at www.iipa.com.

³ ESA's reported dollar figures reflect the value of pirate product present in the marketplace as distinguished from definitive industry "losses." See Appendix B of IIPA's 2006 Special 301 report.

⁴ For many countries, the "total" loss figure does not include losses for one or more industry sectors where figures are unavailable (NA). Consequently, the totals for these countries are even more conservative.

GSP means that the U.S. government is reviewing this country's IPR practices under the Generalized System of Preferences trade program.

OCR means out-of-cycle review to be conducted by USTR.
