Endnotes:

<sup>1</sup> BSA's 2006 statistics are preliminary. They represent the U.S. publishers' share of software piracy losses in each country, and follow the methodology compiled in the Third Annual BSA/IDC Global Software Piracy Study (May 2006), available at <http://www.bsa.org/globalstudy/>. These figures cover, in addition to business applications software, computer applications such as operating systems, consumer applications such as PC gaming, personal finance, and reference software. BSA's 2006 piracy statistics will be updated later in 2007 and will be made available on the IIPA website at such time.

<sup>2</sup> MPAA does not have 2006 statistics available at the time the IIPA 301 submission was filed. In 2006, MPAA changed its methodology of analyzing physical (hard goods) and internet piracy, and its 2005 piracy loss statistics for a limited number of countries is posted on IIPA's website.

<sup>3</sup> ESA's reported dollar figures reflect the value of pirate product present in the marketplace as distinguished from definitive industry "losses." The value of pirate product in the market in the Philippines reflects only the value of pirate product for personal computers. ESA's methodology is described in Appendix B of IIPA's submission.

<sup>4</sup> Paraguay: RIAA reports that its estimated losses to the records and music industry include both domestic piracy in Paraguay and estimated losses caused by transshipment.
